

**Responsibly sourced and
100% biodegradable**

Black forest laminate collection is manufactured from sustainable and renewable wood surplus and waste from the wood industry. Sourced from renewable Pine, Conifer or spruce plantation forests and never from exotic woods and rainforests that are currently under threat of extinction making Black forest a natural product that's both environmentally friendly and 100% biodegradable. **Black Forest's** design layer is created by taking a picture of the real timber giving you a true to life wood look and feel with out having to exploit our natural forests. Printed using non-solvent based inks, which contain no heavy metals means it does not emit any toxic fumes on combustion.

Black forest uses reclaimed energy.

Due to the high amount of thermal energy that can be extracted when burned. We use this energy in the manufacturing process by recycling all the wood waste from our milling and sawing process to heat up the production facilities. **Black forest** is long lasting, beautiful and environmentally friendly.
